

MIN SEOHYEON

TECHNICAL ARTIST | GRAPHICS PROGRAMMER

weare1842@gmail.com
github.com/Seohyeon-Min |
seohyeon-min.github.io/my_portfolio
linkedin.com/in/seohyeon-min

Technical artist and graphics programmer building real-time visual systems, content creation tools, and reusable shader workflows in Unity and C++/OpenGL. Combines hands-on art integration with rendering implementation, procedural animation, and performance debugging.

SKILLS

Graphics / Tools	OpenGL, GLSL, Unity URP, ShaderLab, Blender (modeling, rigging), RenderDoc; UI shaders, framebuffer post-processing, procedural animation, C# editor tools and presets
Unreal Engine	Basic VFX asset setup and modification with Cascade and Niagara (EDGE DRIVE)
Programming	C++, C#, C, Python, JavaScript; object-oriented programming, gameplay/engine architecture, debugging, performance profiling
Workflow	Git branching and merge review, Perforce, Jira, GitHub Projects/Issues, Notion, CMake, Visual Studio; technical feedback and visual integration

EXPERIENCE

POSEIDON SKATE 🎮

Sep 2026

Technical Art / Shader Development · Character Modeling & Rigging | Unity URP / HLSL / C# / Blender / Jira / Perforce

- Built ocean, wave, and tornado HLSL shaders (flow noise, domain warping, Voronoi caustics) as a rideable procedural water surface.
- Modeled and rigged a low-poly Poseidon character in Blender (25-bone skeleton) and integrated it into Unity via FBX.
- Authored a VFX splash-ring shader with randomized per-bump timing and Voronoi facet detailing for landing impacts.
- Coordinated a three-week team production using Jira for scheduling/priorities and Perforce for source control.

STREET TYPER 🎮

Aug 2026

Technical Art / UI / Art | Unity URP / C# / ShaderLab / Notion

- Owned original 2D art, UI composition, particles, outlines, camera shake, hit VFX, and animated feedback for a shipped bilingual typing-combat game.
- Specified, evaluated, debugged, and integrated an AI-assisted reusable UI shader workflow for rounded forms, gradients, drop/inner shadows, blur, presets, and Inspector iteration.
- Published a playable build on itch.io and prepared the game for a Steam release.

TOO HOT! 🎮

Jul 2026

Technical Art / Visual Integration | Unity / ShaderLab / VFX / Notion

- Created and integrated the game's 2D shadow treatment, pattern-specific VFX, UI, animation, hit feedback, and visual hierarchy; tuned width and length controls for readable shadows across combat spaces.
- Specified GameManager and per-stage ScriptableObject data flow, save-range safeguards, chapter selection, and clean-state debug controls; reviewed teammate-authored gameplay implementations.
- Balanced direct art/technical-art execution with a 130+ item P0-P3 backlog, two-programmer coordination, code review, merges, and final visual integration.

NEW MANZO 🎮

Aug 2025 – Sep 2026

C# Programmer / Technical Art | Unity / C# / Notion

- Implemented procedural leg animation for a multi-legged boss using ground raycasts and step-arc motion.
- Built raycasting-based underwater visibility and post-processing for atmospheric rendering.
- Contributed fish-schooling AI and beat-linked hunting; built Unity editor tools for scene setup, area editing, and UI style presets. Repository lead contributor with 417 commits.

MANZO 🎮

Sep 2024 – Dec 2025

Graphics / Engine Programmer | C++ / OpenGL / GLSL / Notion

- Built a custom C++/OpenGL renderer with layer-sorted draw queues and a framebuffer-based post-processing pipeline for bloom, underwater distortion, god rays, ripples, and transitions.
- Implemented reusable particle motion types and integrated shader- and renderer-driven visual effects into gameplay scenes.
- Profiled severe frame drops, traced the issue to redundant per-frame collision checks, and removed the repeated work to stabilize performance. Largest repository contributor: 366 commits.

TEACHING ASSISTANT - GAME DEVELOPMENT PROJECT I

Spring 2025

- Supported ~30 DigiPen Korea students with C++ implementation and debugging, providing actionable technical feedback on team projects.

ADDITIONAL PROJECTS

DRAGON HEAD (ART STUDY) 🎮 - Sculpted, shaded, and rendered a stylized dragon head from base mesh through final render, demonstrating traditional 3D art fundamentals.

EDGE DRIVE 🎮 - Placed and adjusted existing VFX assets in Unreal Engine with basic Cascade and Niagara modifications.

DOUBLE HIT 🎮 - Implemented C++ texture/sprite management, collision, GameObject/GameComponent architecture, and shared engine services.

BIRD STRIKE 🎮 - Implemented audio-timeline beat detection, rhythm-synchronized spawning, dynamic attack subdivision, movement, and original art/audio in a custom engine.

EDUCATION

B.S. Computer Science in Real-Time Interactive Simulation | Expected Graduation: May 2028
Keimyung University / DigiPen Institute of Technology | GPA 3.958/4.0
