TECHNICAL ARTIST | GRAPHICS PROGRAMMER | REAL-TIME VFX

Technical artist and graphics programmer building real-time visuals across Unity, custom rendering, shaders, VFX, UI, and gameplay feedback. I write and debug graphics code, turn visual direction into engine-ready systems, and lead multidisciplinary teams through integration and delivery, with a foundation that transfers quickly to new rendering pipelines and tools.

SELECTED PROJECTS

TOO HOT!

UNITY | TECHNICAL ART | 2026

- Created and integrated a custom shadow shader, pattern-specific VFX, UI styling, animation, and hit feedback for a readable 2D boss-action presentation.
- Defined system behavior and architecture requirements for data-driven stage flow, progression safeguards, and editor-facing test controls; reviewed and tested teammate-authored implementations.
- Owned a 130+ item cross-discipline backlog, prioritized P0-P3 scope, assigned work, directed revisions, and coordinated main-branch integration under a game-jam deadline.

STREET TYPER

UNITY URP | TECHNICAL ART | 2026

- Built the visual layer for a bilingual typing-combat game with original 2D art, UI composition, hit VFX, particles, outlines, camera shake, and animated feedback.
- Specified, evaluated, and integrated a reusable URP UI styling workflow supporting rounded forms, gradients, shadows, blur, presets, and inspector-driven iteration.
- Produced a playable build in a 10-day team scope by aligning visual priorities, ownership, and moment-to-moment gameplay readability.

MANZO

C++ | OPENGL | GLSL | 2024-2025

- Implemented graphics and engine code for a custom-engine rhythm adventure, including draw-call rendering, multi-pass post-processing, particles, underwater shaders, and screen transitions.
- Created and integrated character, environment, UI, and pixel-art assets while coordinating technical and visual direction across the project.
- Improved rendering performance from approximately 40 FPS to 60 FPS through pipeline optimization and visual-system iteration.

TECHNICAL SKILLS

ENGINES / GRAPHICS	Unity, URP/ShaderLab, OpenGL, GLSL, custom shadows, SDF UI, blur, post-processing
PROGRAMMING	C++, C#, C, Python, JavaScript, HTML
WORKFLOW	Git, CMake, Visual Studio, WSL, shader debugging, profiling, technical direction

EDUCATION & LEADERSHIP

B.S. Computer Science in Real-Time Interactive Simulation

2026-PRESENT

Keimyung University / DigiPen Institute of Technology | GPA: 3.958/4.0

Founder & Organizer, DANGLING Interdepartmental Game Jam

2025

Launched the university's first interdepartmental game jam; managed budget, promotion, operations, and a 36-hour event for 24 participants across five departments.

ADDITIONAL PROJECTS

- DOUBLE HIT** - C++ custom-engine foundations: texture and sprite management, collision, GameObject/GameComponent architecture.
- BIRD STRIKE** - C++ rhythm gameplay, beat-synced spawning, dynamic chaining, original art and audio, production leadership.
- NEW MANZO** - Unity graphics and gameplay prototypes: fish schooling, beat-linked hunting, raycasting, and post-processing.
