

MIN SEOHYEON

TECHNICAL ARTIST | GRAPHICS PROGRAMMER

weare1842@gmail.com
github.com/Seohyeon-Min |
seohyeon-min.github.io/my_portfolio
linkedin.com/in/seohyeon-min

Technical artist and graphics programmer building real-time visual systems, reusable UI shader workflows, and content tools in Unity and C++/OpenGL. Combines hands-on art integration with rendering implementation, procedural animation, and performance debugging.

SKILLS

Graphics / Tools	OpenGL, GLSL, Unity URP, ShaderLab, RenderDoc; UI shaders, framebuffer post-processing, procedural animation, C# editor tools and presets
Unreal Engine	Basic VFX asset setup and modification with Cascade and Niagara (EDGE DRIVE)
Programming	C++, C#, C, Python, JavaScript; collision performance debugging (MANZO), data-driven asset loading
Workflow	Git branching and merge review, GitHub Projects/Issues, Notion, CMake, Visual Studio; technical feedback and visual integration

EXPERIENCE

MANZO 🏆

Sep 2024 – Dec 2025

Graphics / Engine Programmer | C++ / OpenGL / GLSL

- Built a custom C++/OpenGL renderer with layer-sorted draw queues and a framebuffer-based post-processing pipeline for bloom, underwater distortion, god rays, ripples, and transitions.
- Implemented reusable particle motion types and integrated shader- and renderer-driven visual effects into gameplay scenes.
- Profiled severe frame drops, traced the issue to redundant per-frame collision checks, and removed the repeated work to stabilize performance. Largest repository contributor: 366 commits.

STREET TYPER 🏆

Aug 2026

Technical Art / UI / Art | Unity URP / C# / ShaderLab

- Owned original 2D art, UI composition, particles, outlines, camera shake, hit VFX, and animated feedback for a shipped bilingual typing-combat game.
- Specified, evaluated, debugged, and integrated an AI-assisted reusable UI shader workflow for rounded forms, gradients, drop/inner shadows, blur, presets, and Inspector iteration; gameplay code was teammate-authored.
- Published a playable build on itch.io and prepared the game for a Steam release.

TOO HOT! 🏆

Jul 2026

Technical Art / Visual Integration | Unity / ShaderLab / VFX

- Created and integrated the game's 2D shadow treatment, pattern-specific VFX, UI, animation, hit feedback, and visual hierarchy; tuned width and length controls for readable shadows across combat spaces.
- Specified GameManager and per-stage ScriptableObject data flow, save-range safeguards, chapter selection, and clean-state debug controls; reviewed teammate-authored gameplay implementations.
- Balanced direct art/technical-art execution with a 130+ item P0-P3 backlog, two-programmer coordination, code review, merges, and final visual integration.

WAVE SIMULATOR 🏆

Sep 2026

Technical Art / Shader Development | Unity URP / HLSL / C#

- Built a Unity URP water-surface study with custom HLSL, procedural vertex displacement, and layered noise-driven surface motion.
- Implemented reusable wave and halfpipe geometry controls in C#, exposing parameters for interactive real-time experimentation.

TEACHING ASSISTANT - GAME DEVELOPMENT PROJECT I

Spring 2025

- Supported ~30 DigiPen Korea students with C++ implementation and debugging, providing actionable technical feedback on team projects.

ADDITIONAL EVIDENCE

DOUBLE HIT 🏆 - Implemented C++ texture/sprite management, collision, GameObject/GameComponent architecture, and shared engine services.

BIRD STRIKE 🏆 - Implemented audio-timeline beat detection, rhythm-synchronized spawning, dynamic attack subdivision, movement, and original art/audio in a custom engine.

NEW MANZO 🏆 - Contributed Unity gameplay and technical systems for fish schooling, obstacle avoidance, beat-linked hunting, raycasting, and post-processing; repository lead contributor with 417 commits.

EDGE DRIVE 🏆 - Placed and adjusted existing VFX assets in Unreal Engine with basic Cascade and Niagara modifications.

EDUCATION

B.S. Computer Science in Real-Time Interactive Simulation | Expected Graduation: May 2028

Keimyung University / DigiPen Institute of Technology | GPA 3.958/4.0
